

Structures

Free-standing Structures

Y1

In this unit, we will design, make and evaluate a strong chair for Babu Bear.

Knowing More Remembering More:

Remembering previous learning

In Reception, children will have experienced:

- using a range of small tools, including scissors, paintbrushes and cutlery.
- safely using and exploring a variety of materials, tools and techniques, experimenting with colour, design, texture, form and function.
- sharing their creations, explaining the processes they have used.

Skills

I will be able to:

Design:

- I.1 Use pictures and words to convey what I want to design/make.
- I.3 Model ideas with construction kits
- I.5 Talk about how I will make their product

Make:

- I.6 Select materials from a limited range that will meet the design criteria.
- I.7 Explain which materials I am using and why.
- I.8 Select and name the tools needed for making.

Evaluate:

- I.11 Explore existing products and investigate how they have been made.
- I.13 Talk about my design and what they I am making
- I.14 Say how well my product meets the design criteria

Vocabulary

Technical vocabulary

Structure, wall, tower, framework, weak, strong, base, top, underneath, side, edge, surface, thinner, thicker, corner, point, straight, curved, circle, triangle, square, rectangle, cuboid, cube, cylinder, metal, wood, plastic

Process vocabulary

Cut, fold, join, fix, design, make, evaluate, user, purpose, ideas, design criteria, product, function.

Names of tools, equipment and materials used.

Techniques:

Techniques for assembling freestanding structures

Show children how to join sheet materials and reclaimed boxes together using different tapes and glues.

Technical knowledge and understanding

Build walls with these different patterns. Tap away the centre brick in the bottom row of each wall in turn. What happens? Which wall is the strongest?

As a freestanding structure becomes taller its centre of gravity rises. Stability in a structure can generally be increased by making the base wider, making the base heavier or adding buttresses.

Ask the children to build and explore a variety of freestanding structures through focused tasks. Use a range of construction kits.

Inspiring Individuals

Renzo Piano

Dame Zaha Hadid

Knowing More Remembering More:

Knowing more in Y1

What is a structure? A structure is a 3D shape made from different materials and parts. They are made to be strong, stable and sturdy.

What is a free-standing structure? A free-standing structure is a structure that stands up on its own without being attached to anything else.

What is stability? Stability is the extent to which a structure will fall over if a force is applied.

What is a buttress? A buttress is a structure added to a wall, tower or framework to make it more stable or stronger.

What is brick bonding? Brick bonding is when bricks are arranged in a wall to improve the performance of the structure or improve its appearance.

What is a prototype? A prototype is a model which allows children to try out ideas
